

Procedure for Anderson Habel
Replication and Extension of
Groseclose, Levitt, and Snyder (1999)

Sarah Anderson and Philip Habel

November 26, 2007

- Necessary Files
 1. Save the following Matlab files to a folder: `icremed`, `icremedhouse`, `icrerea`, `icrerea-acu99`, `igeta`, `igetab`, `igetans`, `igetb`, `igetbb`, `igetbns`, `igeti`, `igetl`, `igetsig`, `igetti`, `igetxns`, `iiter`, `ildc7199`, `isetupacu99`, `store`
 2. Save the following user created .txt files to the same folder: interest group file [henceforth `igfile`]
 3. Concerning `igfile`:
 - (a) Make separate file of each interest group score with four columns. Columns must be in the following order: year, chamber, an identification number for each member (e.g. ICPSR member code), interest group score. Do not use column labels.
 - (b) Delete any rows with missing values.
 - (c) Save `igfile` in the folder with the Matlab files.
- Setup for Matlab Files
 1. In `isetupacu99.m`:
 - (a) On line 25: Set `OptStep` to 1. This is the default.
 - (b) On line 24: Set `IterSteps=1000` (The number of iterations needs to be sufficiently large so as to reach the point where `OptStep` divides by 0; the precise number of iterations is not important.)
 2. In `ildc7199.m`:
 - (a) On line 17: Change `BeginYear` to be first year of the score
 - (b) On line 21: Change `HEndYear` to be the last year of the score
 - (c) Rewrite line 44: `load igfile.txt; ada = igfile; clear igfile.dat;`
 - (d) Make sure that the base year is properly identified. Change `BaseYear` = if necessary.
 - (e) Save these files.
- Working in Matlab
 1. Change your directory to the folder where the files are saved.
 2. Type `isetupacu99` in the command screen.

3. Type `iiter`.
4. Run the estimation until Matlab displays an error stating that it has divided by zero.
5. In the directory window, open the newly created file A and B, which list the the a and b parameter estimates in chronological order beginning with the House and followed by the Senate.
6. Copy and paste these a and b estimates into a new file such as an Excel spreadsheet.
7. Use the formula on page 35 of GLS (1999) to calculate adjusted interest group scores.
